KSM VISION Sp. z o.o.

Krzysztof Malowany CEO

The KSM Vision Sp. z o.o. company has developed a system for quality inspection of glass vials containing tablets. The system bases on machine vision setup and dedicated software being developed by the company. Thanks to high flexibility during the system design stage that is the hallmark of KSM Vision, it was possible to non-intrusively tested the device into an already existing drug manufacturing line. One of the key advantages is application of machine learning algorithms which makes it easy to adjust the system to customers' individual needs.
